JABBAR MEMON

LEAD SOFTWARE ENGINEER | BACKEND & EV PLATFORM ENGINEERING

8485999917 | memonjabbar2@gmail.com | Pune, Maharashtra, India

linkedin.com/in/jabbar-m-4ab5347a

PROFESSIONAL SUMMARY

Lead Software Engineer with 7+ years of experience building scalable backend platforms, distributed systems, and cloud-native applications across EV mobility, fintech, and identity-verification domains. Currently leading EV platform engineering at Zoop Energy, focused on eMSP capabilities, OCPI 2.2.1 integrations, and building a Charge Point Management System (CSMS) from the ground up. Hands-on expertise in Golang, Node.js, NestJS, TypeScript, Kafka, PostgreSQL, MongoDB, Redis, Docker, and Kubernetes. Experienced in technical strategy, system design, cross-platform integrations, and leading engineering teams of 5.

TECHNICAL SKILLS

Languages: Golang, TypeScript, JavaScript, Python, Java

Backend: Node.js, NestJS, Express.js

EV & Mobility: OCPI 2.2.1, eMSP platforms, CSMS development, CPO integrations, RFID-based charging workflows

Data Engineering & Messaging: Kafka, ETL Pipelines, Airbyte, ClickHouse (Silver & Gold data layers, analytics)

Databases & Analytics: PostgreSQL, MongoDB, ClickHouse, Redis, DynamoDB, BigQuery

Cloud & DevOps: GCP, AWS, Docker, Kubernetes, CI/CD

Observability: New Relic, Elastic APM, Sentry

Architecture: Microservices, distributed systems, event-driven architecture, system design

PROFESSIONAL EXPERIENCE

ZOOP ENERGY | **Lead Software Engineer** | *June 2026 – Present* | Pune, India · Hybrid

- Lead engineering for EV mobility products, building eMSP platform capabilities and developing a Charge Point Management System (CSMS) from the ground up.
- Architect and implement OCPI 2.2.1 integrations to enable interoperability between eMSPs and Charge Point Operators (CPOs).
- Build backend services using Golang, Node.js, NestJS, and TypeScript, with a focus on scalable service design and reliable integrations.
- Design charging-session workflows covering RFID-based user authentication, wallet-balance validation, and session initiation.
- Led the first ChargeIndia hub integration into production, connecting 721 charging stations across 8–10 CPO networks.
- Supported the initial production rollout with 10+ successful charging sessions on day one; further expansion of 4,000+ stations was an estimate/target.

Used ClickHouse to build Silver and Gold data layers for the EV platform, enabling curated datasets and analytics.

ZOOP.ONE | **SDE 3** | *April 2023 – May 2026* | Pune, India · Hybrid

- Led the Unified Data Interface (UDI) platform end-to-end, creating a centralized abstraction layer for identity-verification data providers.
- Integrated NPCI, DigiLocker, and CVL through standardized APIs; designed manual fallback orchestration for third-party provider outages.
- Built Airbyte-based ETL pipelines replicating MongoDB and PostgreSQL operational data into BigQuery, and designed Kafka-based asynchronous workflows.
- Architected backend services supporting high-volume B2B identity-verification and customer-onboarding journeys.

Used ClickHouse to build Silver and Gold data layers for B2B analytics, supporting curated data and analytical reporting.

- Improved service observability through monitoring, tracing, and alerting; mentored engineers and led architecture reviews.

PROFESSIONAL EXPERIENCE (CONTINUED)

ZOOP.ONE | **Software Development Engineer II** | *March 2020 – March 2023*

- Designed and implemented ZOOP Stack, powering identity-verification services for enterprise clients.
- Built an asynchronous billing service managing transaction deductions and wallet balances.
- Developed centralized email and SMS communication services and a data service used across microservices.
- Designed and developed ZOOP Studio (Beta), a drag-and-drop workflow platform for configuring verification flows.
- Built daily transaction-archival scripts and storage workflows using GCP Cloud Storage.
- Refactored microservice unit tests using Behavior-Driven Development (BDD); containerized services with Docker and deployed workloads on Kubernetes.
- Led a team of 5 engineers delivering core platform features.

JUMP 360 | **Software Engineer (SDE 1)** | *January 2018 – March 2020* | Ahmedabad

- Migrated legacy applications to AWS serverless architecture and led infrastructure migration from DigitalOcean to AWS EC2.
- Migrated databases from MongoDB to DynamoDB and integrated Stripe payment gateway across multiple products.
- Worked directly with clients to understand requirements and deliver software solutions.

LEADERSHIP & SYSTEM DESIGN

- Lead technical discussions, architecture decisions, code reviews, and engineering delivery across backend platform initiatives.
- Design distributed backend systems and event-driven microservices for high-volume APIs and asynchronous workflows.
- Mentor engineers and guide teams through technical planning, implementation, and production readiness.

EDUCATION

Dhirubhai Ambani Institute of Information and Communication Technology — M.Sc. IT | Gandhinagar | June 2015 – April 2017

JG College of Computer Application — B.C.A | Ahmedabad
